

Service and Training Offerings

WHAT DO YOU NEED TO GET THE MOST OUT OF JAWS?

- 1 Basic hands-on training
- 2 Advanced administrator training
- 3 Understanding how to provide your business users user-friendly views into their processing
- 4 Extending the power of JAWS utilizing the Command Line Interface and Java API
- 5 A review of the features & functions of JAWS including new features in the latest product release

Terma Software Labs now offers the training you need to get the most out of JAWS Workload Service Manager.

JAWS QuickStart

QuickStarts are the best and easiest way to get up and running fast and efficiently. Our trained consultants work with you to install, configure and optimize JAWS in your environment. You'll learn how to create business areas & jobstreams and run reports for your users. This option provides the knowledge a new customer needs to maximize the use of JAWS.

JAWS Business/Application User Training

One of the most valuable aspects of JAWS is its ability to provide a meaningful view of application processing to your Developers, Managers, or Line of Business users. This course provides the training needed for these users to gain the most benefit from JAWS.

JAWS Administrator Users Training

This is a technical in-depth JAWS Administrator training. Admins will become adept at utilizing JAWS in your organization. In addition to providing hands-on experience with JAWS, it also includes database maintenance, command line interface, import/export, and troubleshooting topics.

Advanced Command Line Interface (CLI) Mentoring

The JAWS client provides everything you need to monitor, analyze and report on your AutoSys processing, but some organizations want the ability to dive deeper into the value that JAWS can provide. Utilizing the CLI will allow you to create custom reports, perform batch edits to the objects in JAWS and have personalized access to the data stored in JAWS. No previous programming experience is required.

Advanced Java API Mentoring

For those who want to extend the power of JAWS, this service offering provides mentoring in the JAWS Java API. With the API you can integrate JAWS data into another interface or custom application. Please note that participants in this course need to be experienced Java developers.

All offerings are delivered at the customer site.
